Camargue® Camargue® Skye

The standard for quality
and design in patio covers.

Camargue is for those who love a beautiful and sleek finish. The seamlessly integrated options and side infills add to the soothing environment, surrounded by greenery and with maximal control over the weather conditions through the rotating aluminium louvers.

Camargue Skye takes it to the next level with its rotating and retractable louvered roof. With the same invisible integration of all components, of course.

Comfort

Comfort, design and engineering meet the highest possible standards. The Camargue and Camargue Skye are completely customizable to your needs and preferences.

Mastering sunlight

Shelter

Lighting

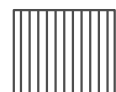

Mastering sunlight

Use the rotating and retractable blades to play with shade and light, or to create better airflow and allow heat to escape. Sun protection screens, sun protection panels, and outdoor curtains expand the possibilities even further.

Camargue®

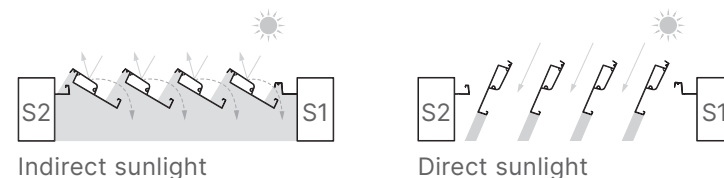

Rotating
louvres

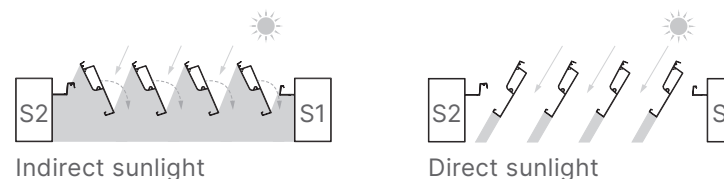

Sun protection louvres

You can rotate Camargue's blades up to 150° and Camargue Skye's up to 135°, allowing you to let the sun in or to create shade, any time of day.

S-Drive Technology

The S-drive patented technology of our Camargue Skye louvered roof ensures an even and smooth opening of the blades by equal distribution of the driving force via a spindle mechanism.

S-DRIVE
PATENTED TECHNOLOGY

Sun protection screens

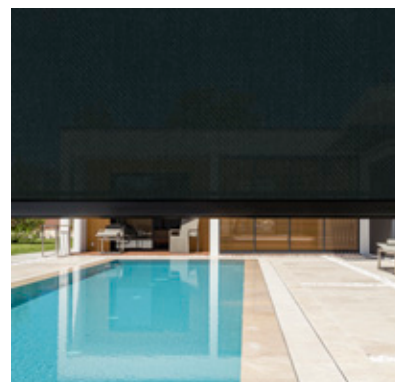

Seamlessly integrated screens allow you to create the perfect shade. The fabric is colorfast and resistant to moisture and heat. Thanks to our patented Fixscreen technology, the screens stay firmly attached to the structure, offering you extra protection from wind and rain.

Fully customizable

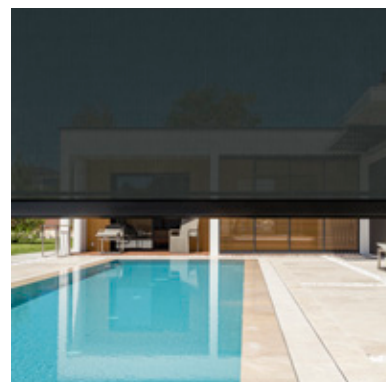

Our fabrics are available in sizes up to 17 m² / 183 ft², and they come in different weave patterns to create the ideal level of transparency or privacy. You can even integrate a full-width crystal window to retain an optimal view of the outside. You can order them in more than 50 RAL colors, or print your own design on the fabric, such as a logo or a photo.

The screen head box perfectly blends in with the cover's supporting structure, resulting into a sleek, minimalist design.

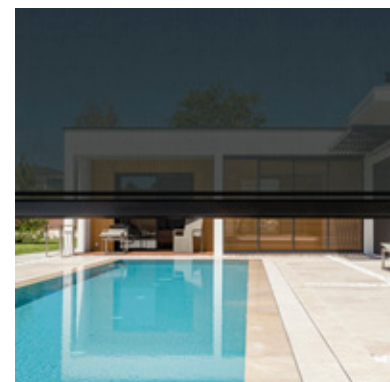

Privacy screen

Fibre glass fabric with 1 % openness for increased privacy

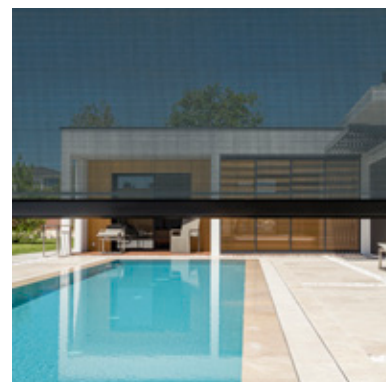

Natté screen

Tightly woven fibre glass fabric with 3 % openness

Sergé screen

Tightly woven fibre glass fabric with 5 % openness

Tuffscreen

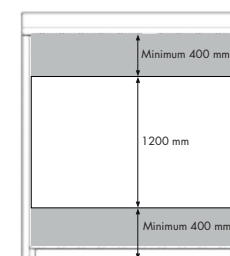

Insect mesh

Crystal window

To stay fully connected with your outdoor space, a transparent vinyl window, our Crystal window, can be added to your screen. This transparent vinyl type consists of PVC (fire rating M2) and has a fixed height of 1,200 mm / 47.24 in, running across the entire width of the screen. There is a minimum distance of 400 mm / 15.7 in between the transparent window and the top and bottom edges.

TIP: A distance of 800 mm / 31.5 in to 1000 mm / 39.4 in from the bottom, guarantees an optimal view when sitting under the patio cover.

Sun protection panels

Mastering the sun in a stylish and cozy way? Our Loggia sun protection panels in an aluminum frame are available with horizontal blades, vertical wood blades, or screen fabric. Pick your favorite infill while adding functionality to your patio cover. These Loggia panels provide just the right amount of shade or sunlight, in any season and at any time.

Privacy

With Loggia Paro Privacy panels, the blades can be manually rotated to the desired position.

Sliding system

The sliding system rests on a bottom guide that compensates for level differences of up to 6 cm / 2.4 in thanks to the patented Flexguide technology.

Outdoor curtains

Our curtains are custom-designed to fit every patio cover perfectly. The durable, water-repellent polyester is specially treated for long-term outdoor use. Their easy-care, stain-resistant finish helps keep them looking fresh. Choose from twelve colors, all designed to retain their color and shape, even after repeated washing (p. 54).

Shelter

Set the blades to automatically close at the first drop of rain. Choose side infills that keep rain and wind at bay, and integrate heating wherever you like—transforming your Camargue or Camargue Skye into the perfect year-round retreat is simple.

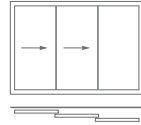

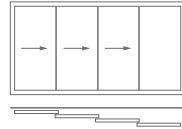

Glass sliding panels

Glass sliding panels are a great option when you want to stay protected from bad weather and insects while maintaining a full view of the outdoors. Our glass panels are made of 10 mm / 3/8 in tempered safety glass and include an optional locking system for added security, for both you and your outdoor furniture. They feature a durable, smooth sliding mechanism and can even be installed on a sloped terrace.

Fixed walls

Fixed aluminum walls add a unique, contemporary character to your outdoor space. They offer protection from harsh weather and provide extra privacy. Choose between vertical (Linarte) or horizontal (Linus) orientation of the aluminum profiles.

Linarte walls can be installed at full height or at a height of your choice, with one side finished in aluminum and the other in canvas fabric.

Linus walls can also be installed at full height or a custom height, with both sides finished in aluminum.

Whether you choose a horizontal or vertical design, both sides of the wall align with the column, creating an elegant and cohesive appearance.

Linarte® Fixed wall

Vertical aluminum profiles

Linus® Fixed wall

Heating

By integrating heating elements into your outdoor living space, you create the ideal climate year-round, even in winter.

Lineo® Heat

Unique on the market, our fixed blade features seamlessly integrated 1,400 W heating modules, equipped with short-wave infrared lamps. You enjoy immediate heat distribution and pleasant radiant warmth exactly where you need it. Choose between a version with one or two heating elements per blade (1,400 / 2,800 W), and between a black or white ceramic-glass cover.

*Efficient technology
positioned exactly
where you need it.*

Beam Heat & Sound

With Beam Heat & Sound, you can enjoy your favorite music and/or functional heating 24/7. The module extends across the full width of the roof and is powder-coated in the color of your patio cover. Both the speakers and heating element are seamlessly integrated, giving this option an extra sleek look. You can also rotate the beam up to 30° to optimize heat distribution. All cabling is completely concealed within the pergola structure. The heating uses short-wave infrared radiation (2,400 W), providing instant warmth and a cozy atmosphere.

Bluetooth

Meanwhile, the waterproof audio system adds to the ambiance under your patio cover. You can connect it to a multi-room system or control it via Bluetooth.

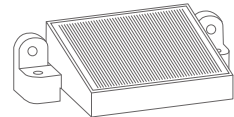

Weather sensors

To offer optimal protection, our patio covers can be combined with a rain and/or wind sensor. These sensors monitor the environment and automatically maintain your desired comfort based on real-time changes. They operate fully autonomously, even when you're away from home.

Wind sensor

A wind sensor controls the sun protection screens of your pergola according to a pre-set wind speed. In the event of extremely strong winds, it can retract your screens to prevent damage.

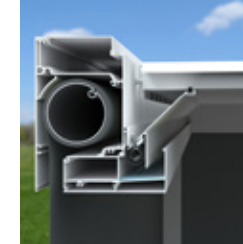

Rain sensor

A rain sensor can automatically close your louvered roof when rain is detected, keeping the furniture underneath your patio cover dry at all times. It includes an integrated temperature sensor, allowing it to also function as a snow sensor. When precipitation is detected below a certain temperature, the sensor will recognize it as snow and move the roof to the pre-set snow position.

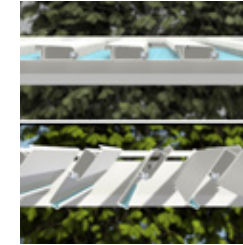

Innovative technologies

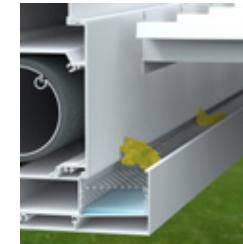

Protecto®

An extra protective profile between the blades and the gutter. This profile offers protection from wind, drizzle, and snow that can enter the patio cover between the blades and the frame.

Innovative gutter border

Welded aluminum drips, coated to match the color of the roof blades. The specially developed gutter border prevents your patio and furniture from getting wet when the blades are opened after a rain shower.

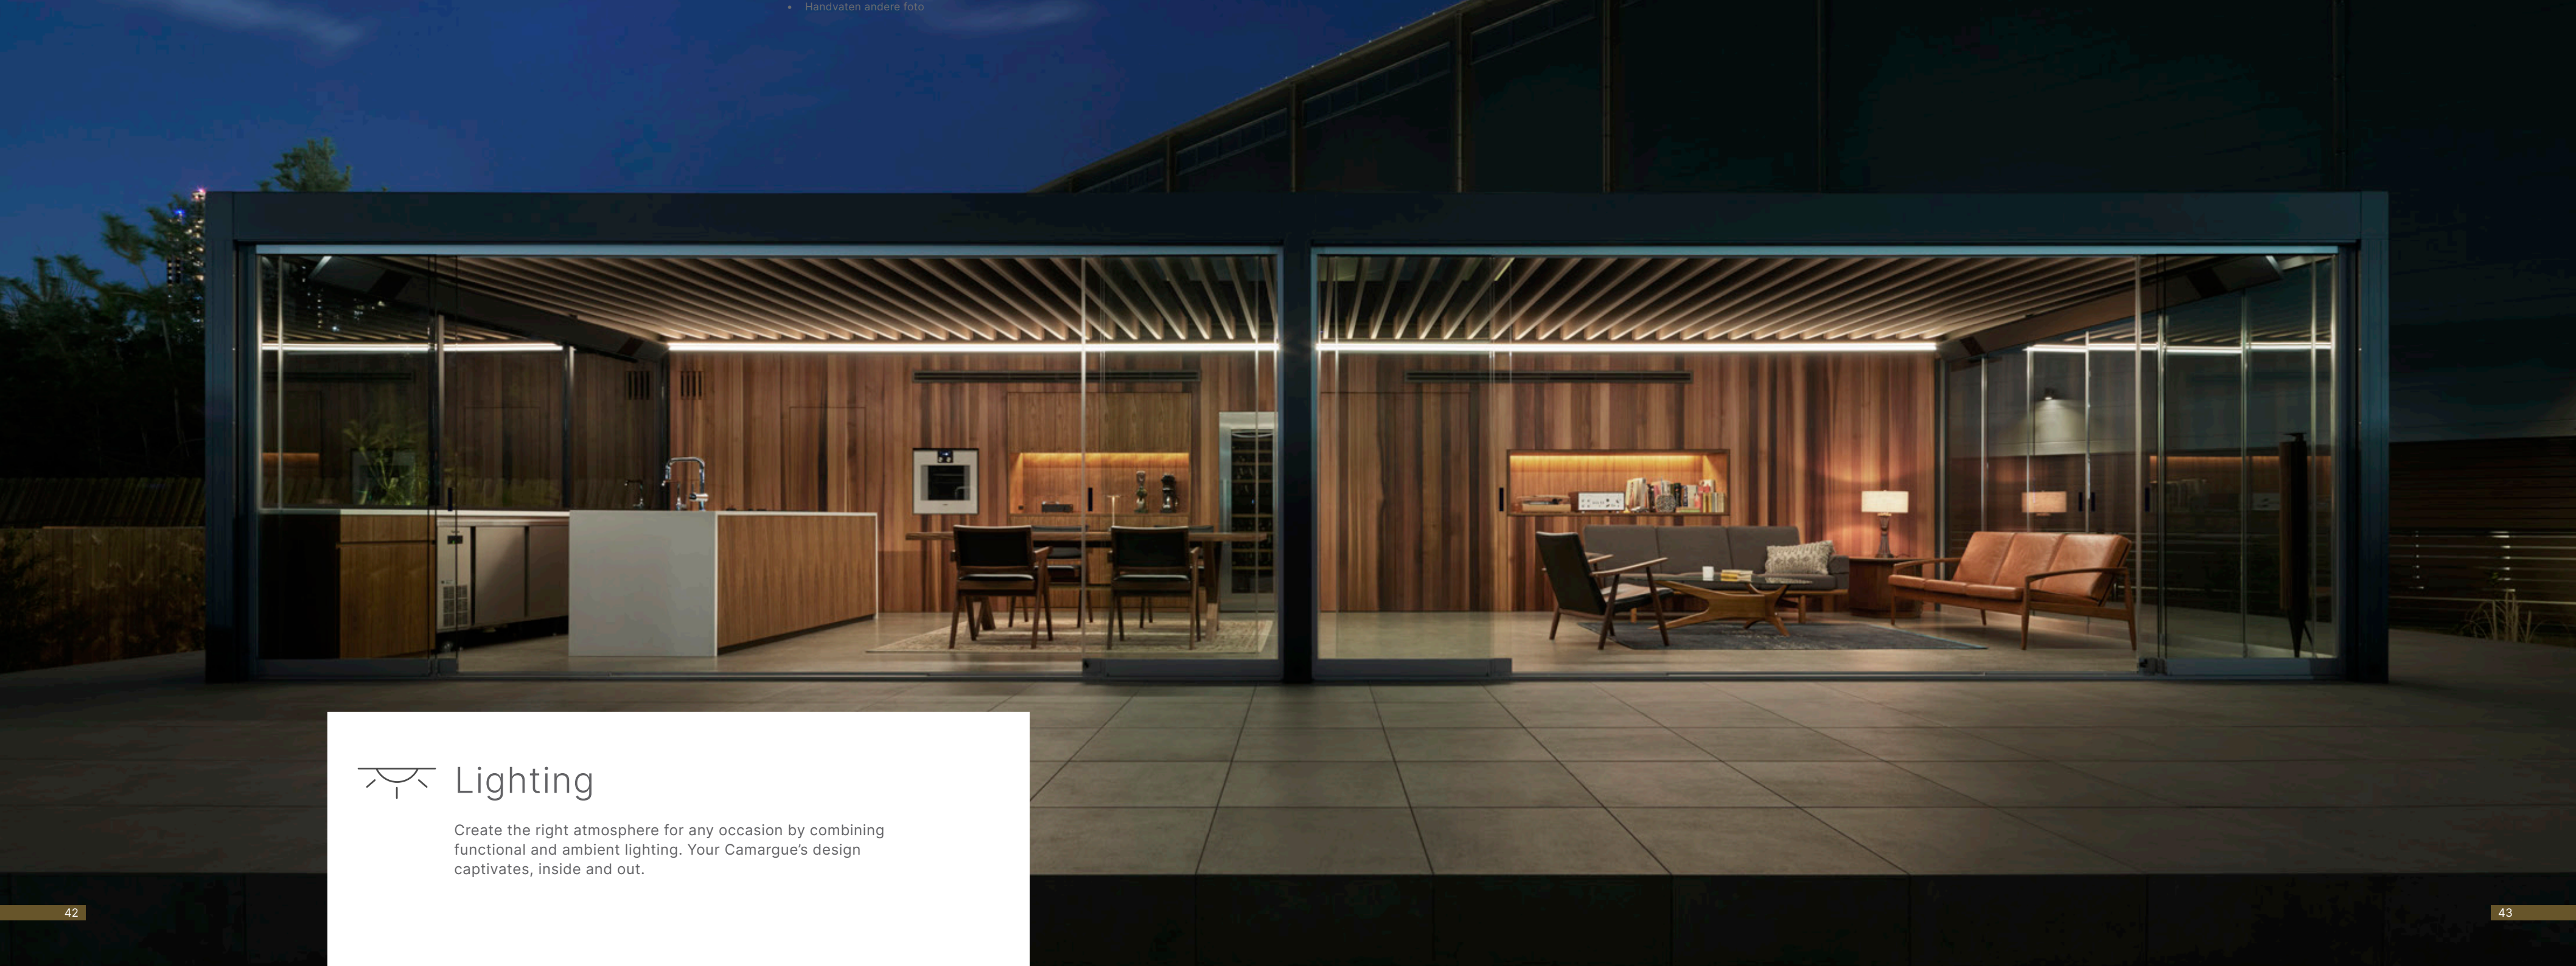

No splashing water

The gutters are equipped with special diffusers to prevent water from splashing.

Integrated water drainage

Water is drained through an integrated downspout concealed within the columns of your choice.

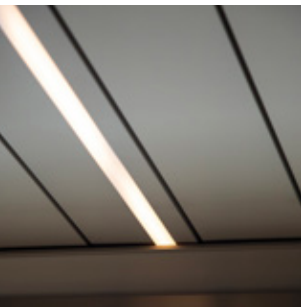

Lighting

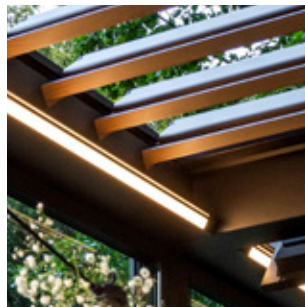

Create the right atmosphere for any occasion by combining functional and ambient lighting. Your Camargue's design captivates, inside and out.

Lighting

With our wide range of lighting options, you can combine functional and ambient light and become the ultimate “mood operator.” Our high-quality outdoor lighting solutions are dimmable and available in warm white or pure white. For our Up-LED, you can even choose lighting in different RGB colors.

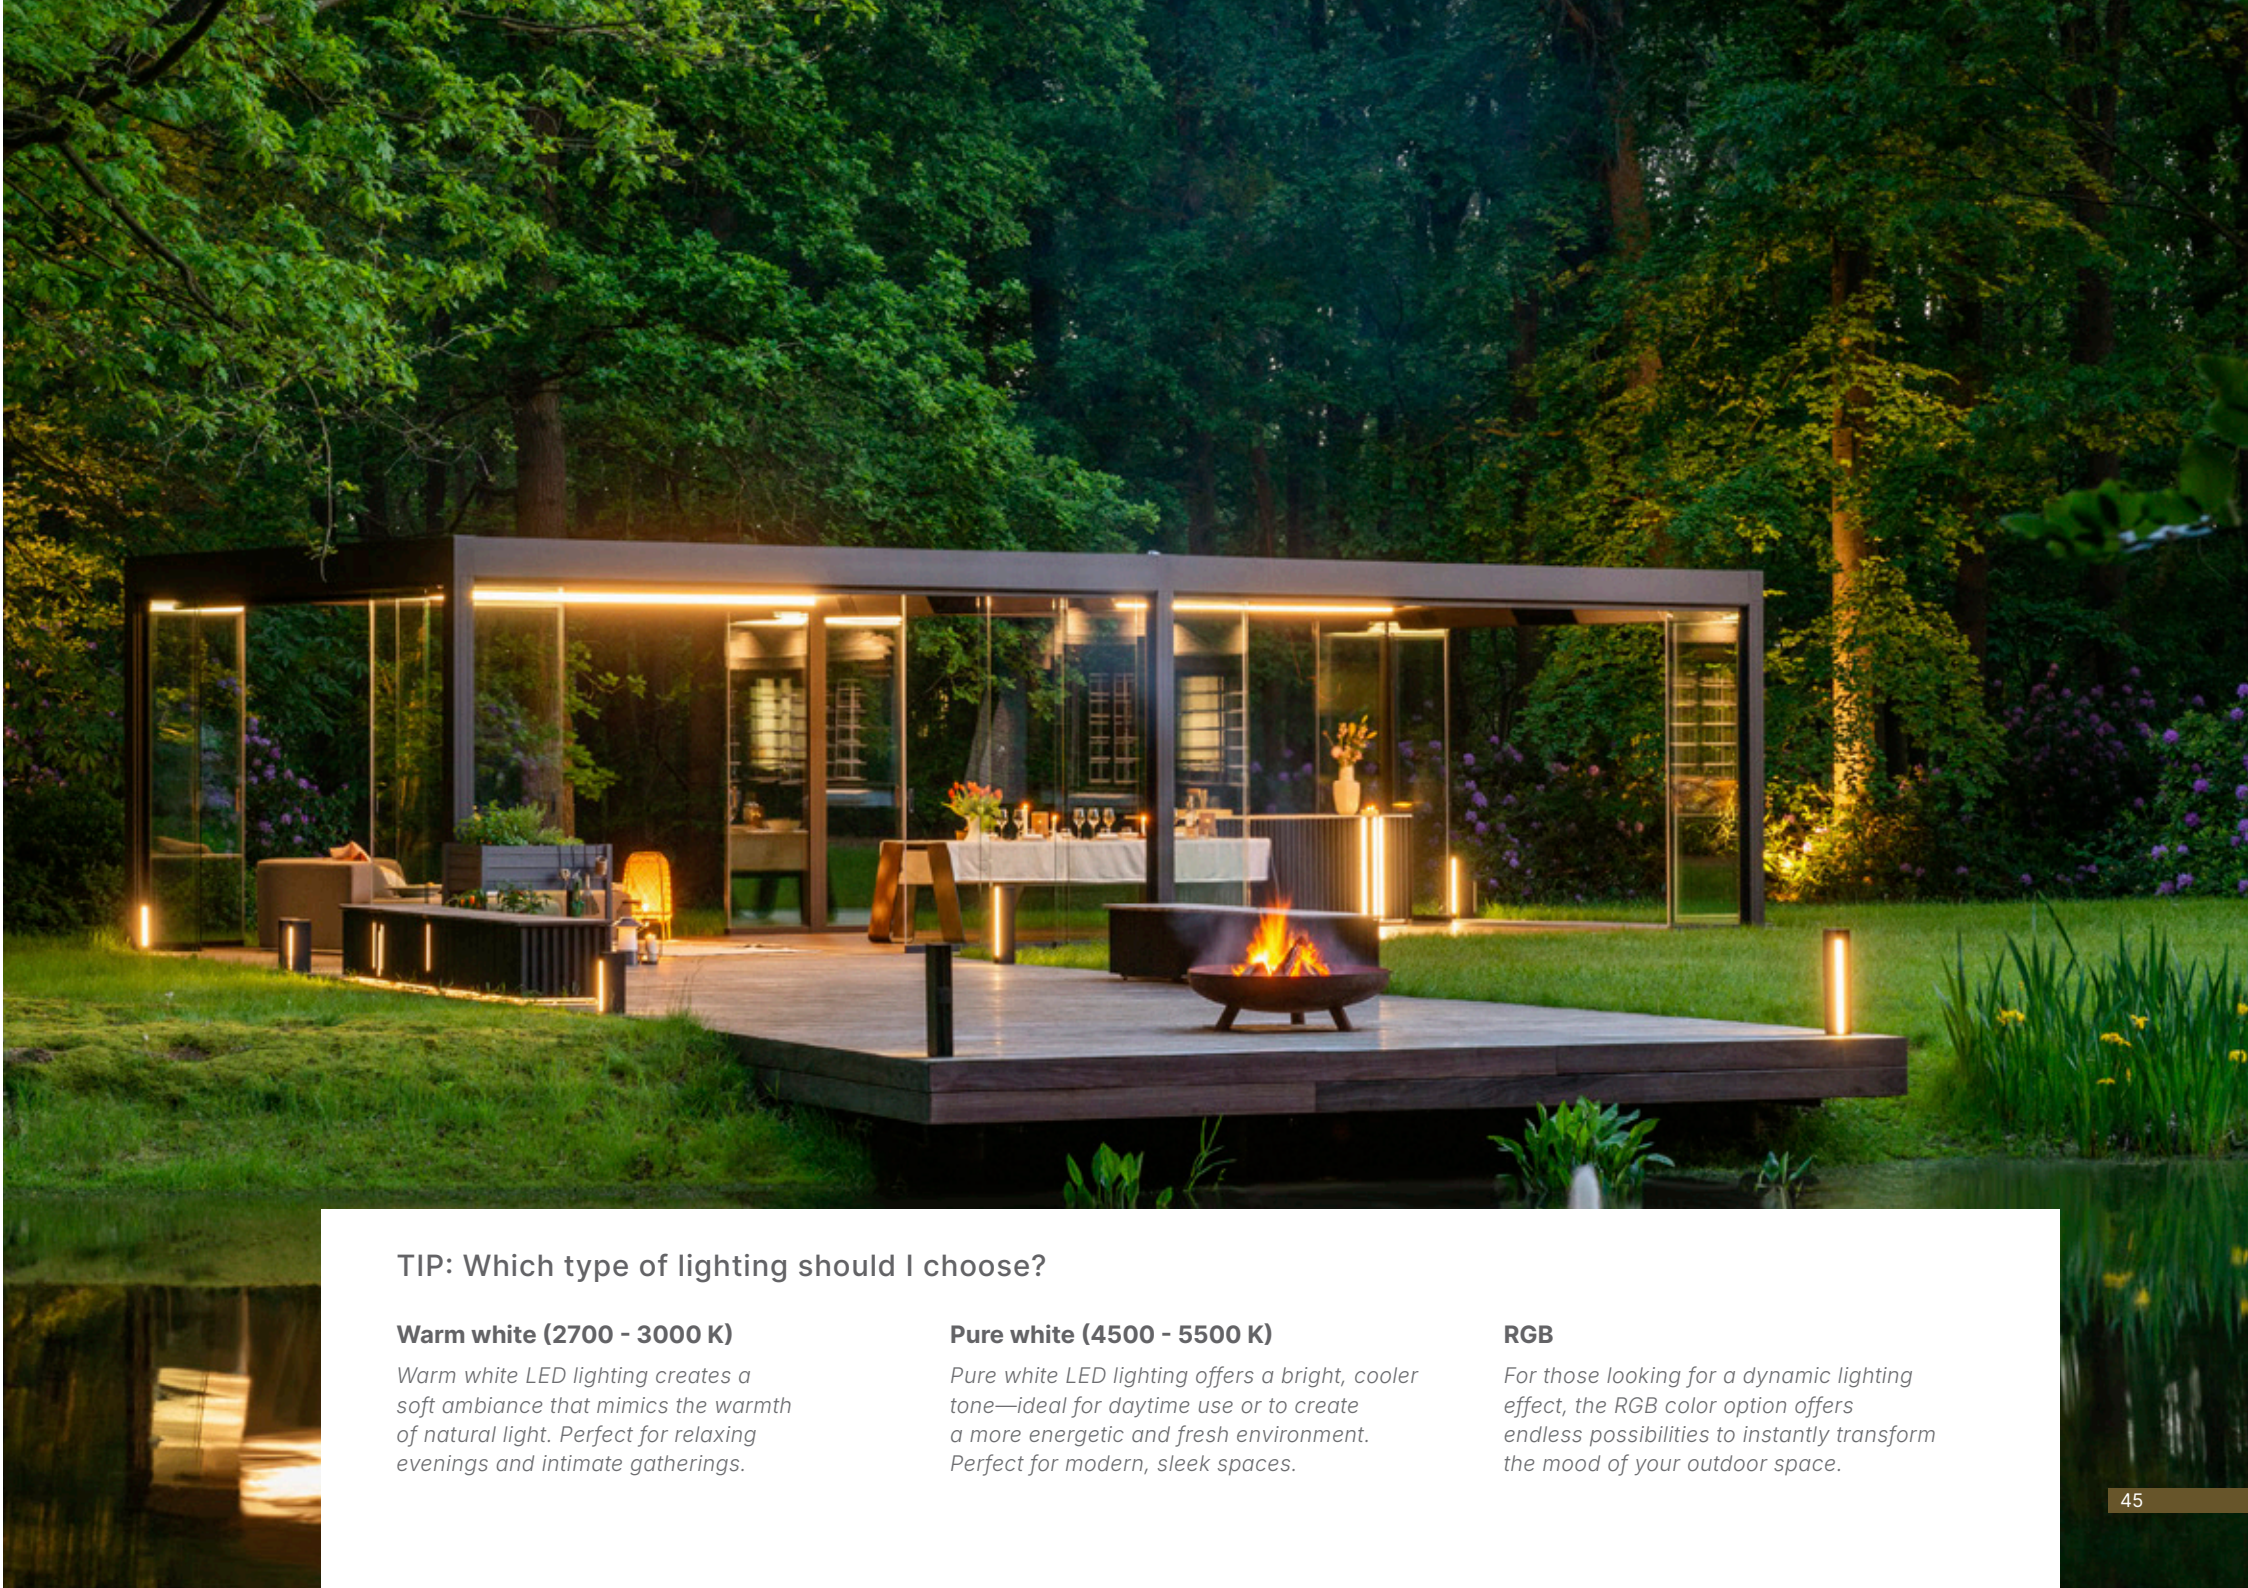

Integrated LED lighting in the blades. 180 high-quality LEDs per meter provide exceptionally bright, evenly distributed lighting—with no visible dots.

Integrated LED lighting on the inside of the frame. Equipped with upward and/or downward lighting, the Up/Down LED provides indirect or direct ambient lighting.

Integrated LED lighting on the inside of the columns. The perfect lighting setup to accentuate your patio cover. Colomno LED pairs well with Down LED.

TIP: Which type of lighting should I choose?

Warm white (2700 - 3000 K)

Warm white LED lighting creates a soft ambiance that mimics the warmth of natural light. Perfect for relaxing evenings and intimate gatherings.

Pure white (4500 - 5500 K)

Pure white LED lighting offers a bright, cooler tone—ideal for daytime use or to create a more energetic and fresh environment. Perfect for modern, sleek spaces.

RGB

For those looking for a dynamic lighting effect, the RGB color option offers endless possibilities to instantly transform the mood of your outdoor space.

Customization

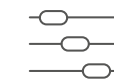

Renson offers a wide range of personalization options, allowing you to design the ideal outdoor environment that reflects your unique style and meets all your practical needs. From color choices to materials and finishes, you can create a patio cover that seamlessly blends with the aesthetics of your home, enhancing your outdoor lifestyle.

Design Styles

Design Styles

In collaboration with trendwatcher Hilde Francq, we've developed six complete Outdoor Design Styles to inspire your creativity and simplify the decision-making process. Each style thoughtfully combines colors, materials, and textures to ensure a cohesive, tasteful aesthetic that enhances the look and feel of your outdoor space.

Find out more about
our Design Styles.

Pure Essence

Light and space – that is Pure Essence. The pale colors and soft finishes give this style a featherlight, almost ethereal feel. It creates a space perfect for casting off your burdens—a place to completely unwind.

Idyllic Garden

Idyllic Garden takes you on a stroll through nature. Subtle greens and muted grays inspired by plants give this style a contemporary feel and invite you to relax, surrounded by greenery.

Earth Oasis

The warm earth tones of Earth Oasis evoke the feeling of summer. Natural and artisan materials connect you to the richness of the earth, creating perfect harmony between indoors and out—transporting you to sun-drenched, faraway places.

Spiritual Harmony

A minimalist style in a dark color palette, that's Spiritual Harmony. Inspired in part by traditional Japanese architecture, this design uses refined colors and materials to create an intimate, contemporary space that balances body and soul, offering a protective and calming atmosphere.

Crystal Lounge

Crystal Lounge is sleek and minimalist. Fresh green tones create an airy feeling, enhanced by a light material palette. These elements come together in a modern, open design that blurs the boundaries between indoors and out.

Tech Cocoon

Contemporary design meets dynamic, playful colors like soft coral. A sense of pure transparency prevails, with a focus on technical materials such as glass and steel. This refreshing style brings a bold, urban look to your garden room.

Additional options

And there's even more. To meet your personal needs and preferences, we offer the following enhancements for your Camargue and Camargue Skye, available on demand.

Fixed, non-rotating blade*

Lineo Fix is a fixed, non-rotating blade that allows you to attach extra accessories to your louvered roof, such as heating, a sound system, additional lighting, an outdoor fan, and more. It replaces one standard rotating blade and remains invisible when the roof is closed.

Surface-mounted power socket

Add a power outlet to your Camargue or Camargue Skye pergola. It comes with two 110 V and two USB (1xA/1xC) sockets and is weather proof (UL listed / NEC Code - 2023 Edition 406.9) - Damp locations and wet locations only when cover closed.

Translucent blades*

Bring more natural light under your louvered roof with Lineo Luce. These translucent blades, made of laminated safety glass and aluminum support profiles, create a sense of openness, even when the roof is closed.

Combine side elements for more comfort

Enhance comfort and protection from intense sun, wind, or cold by combining glass panels with screens and curtains.

On each side of your Camargue (Skye), you can integrate up to three side elements of your choice.

**not available for Camargue Skye.*

Extensive personalization

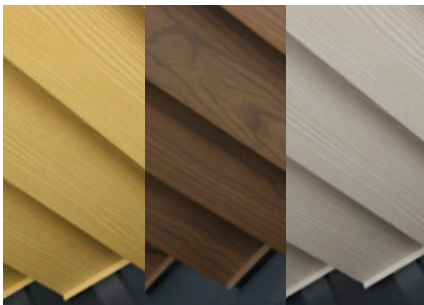

Aluminum

Our pergolas (structure, roof, and side elements) are available in any RAL color, so you're sure to find the perfect shade to match your style. By perfectly coordinating the colors with your existing architecture, you create a harmonious look with a strong visual impact.

Wood look

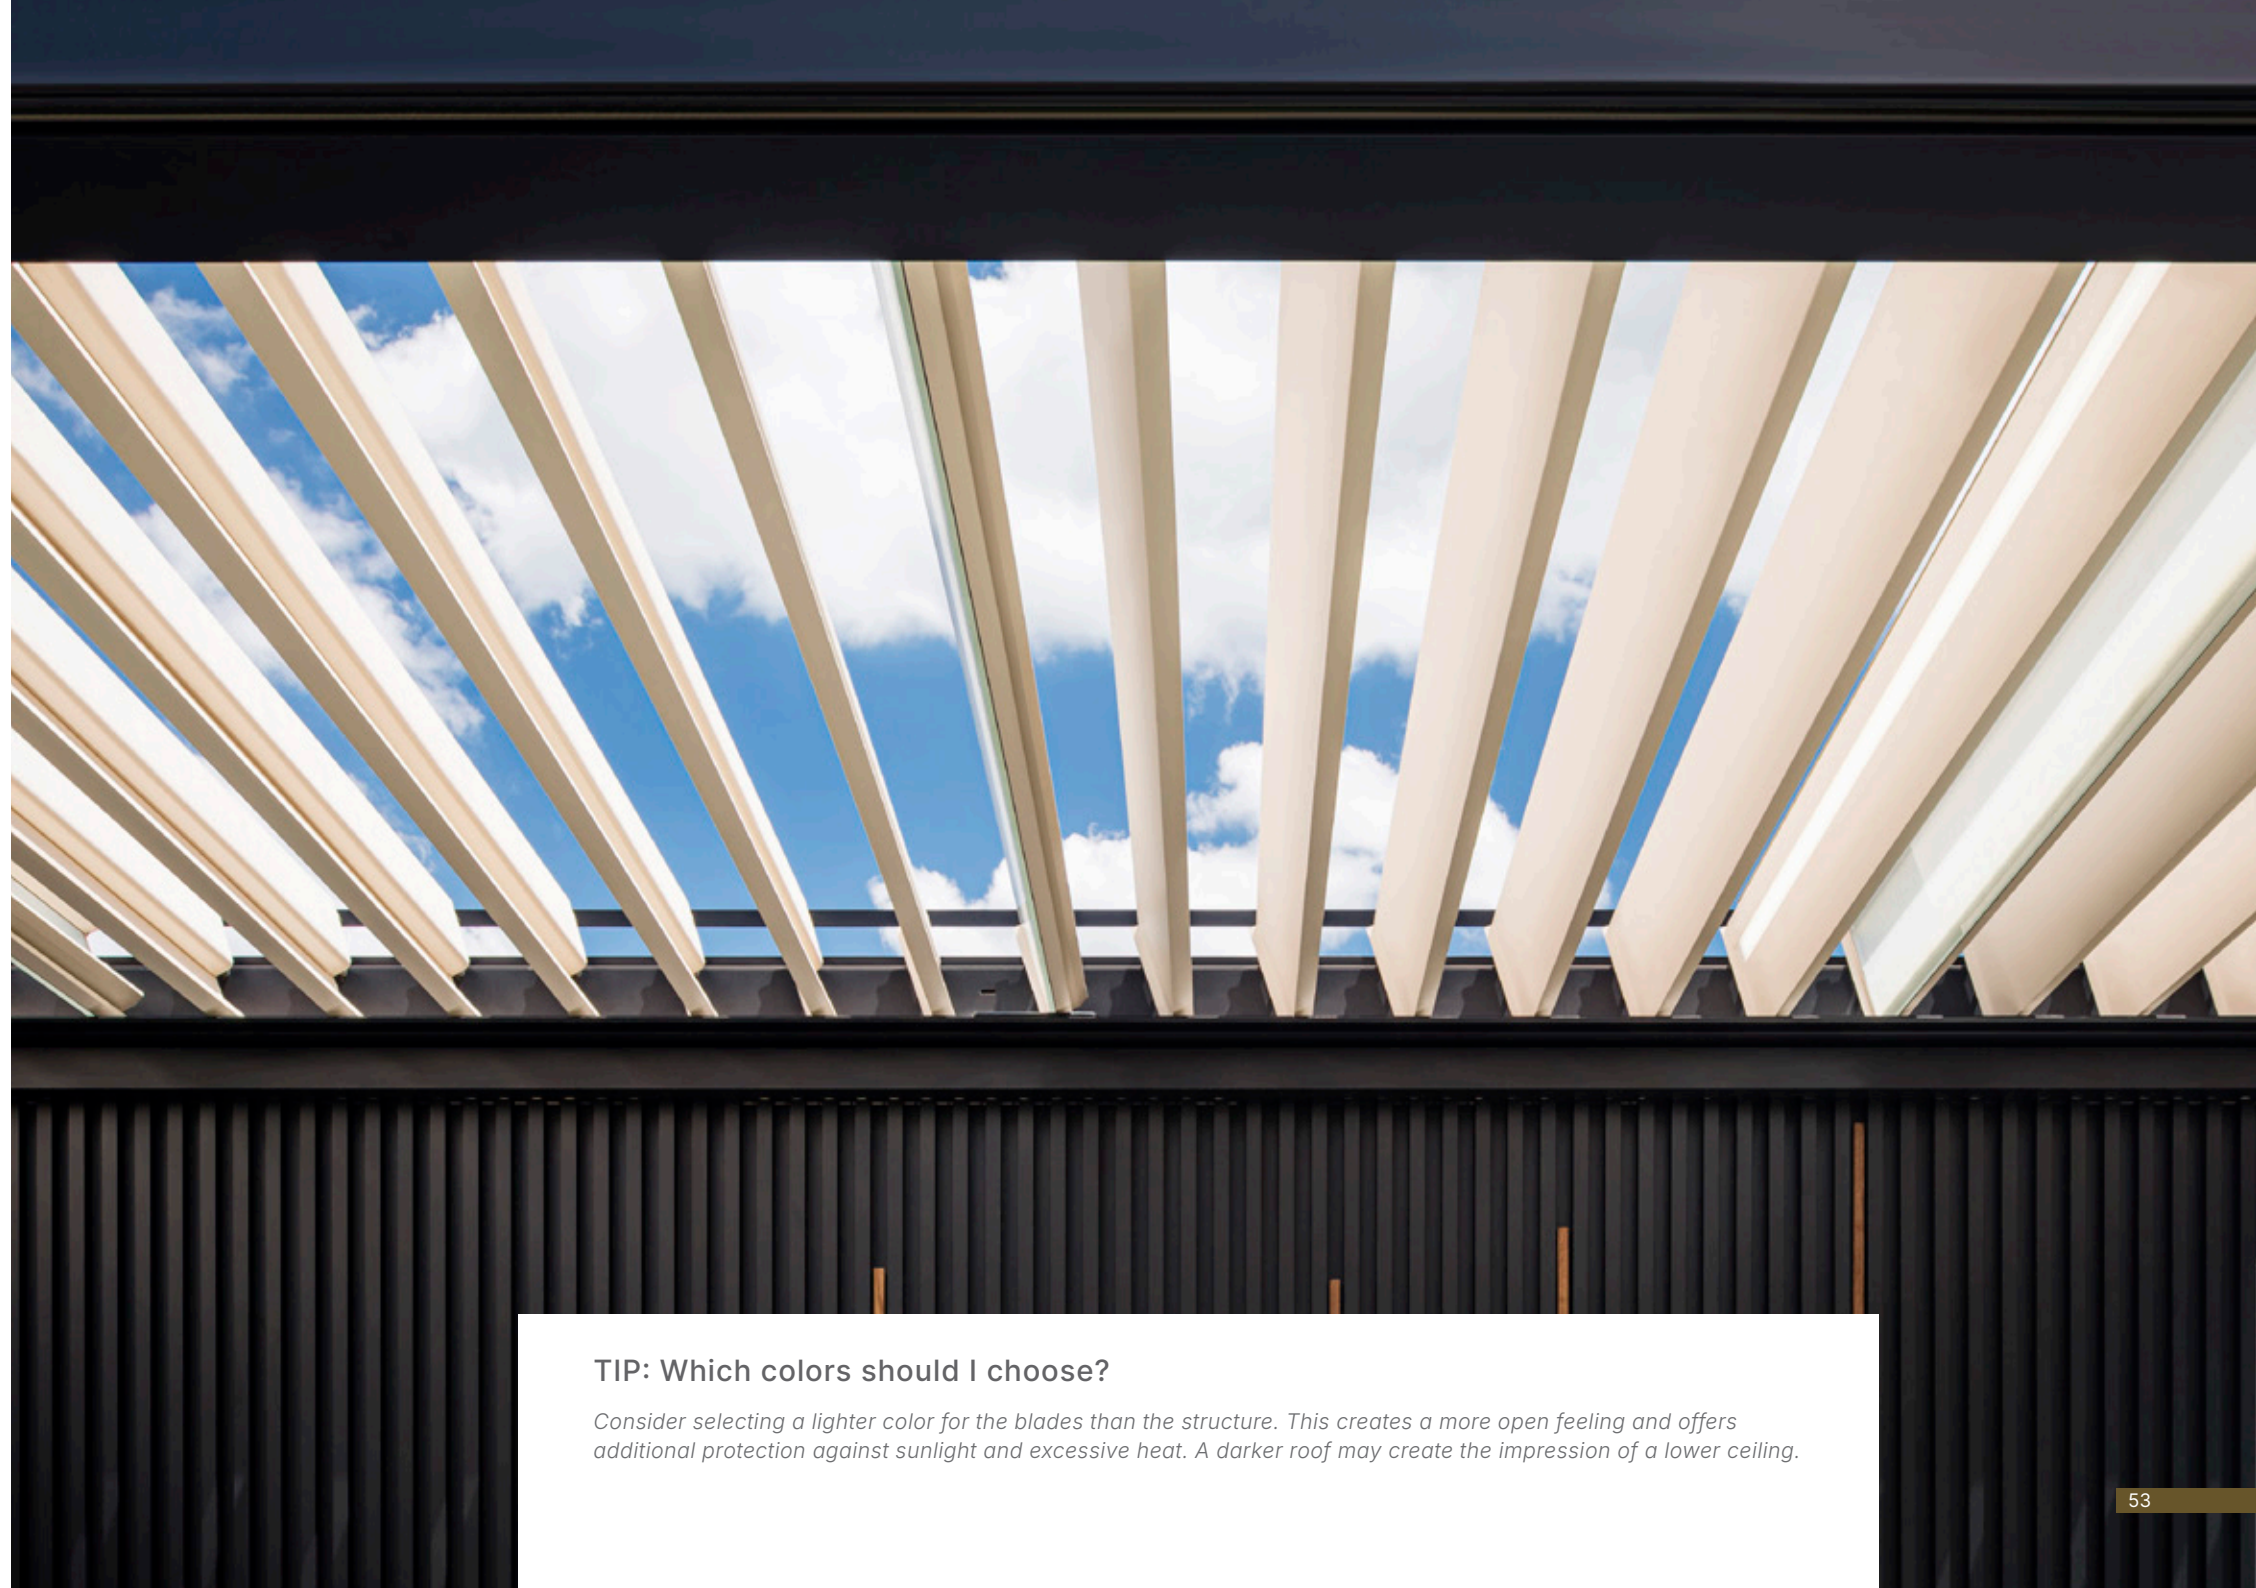

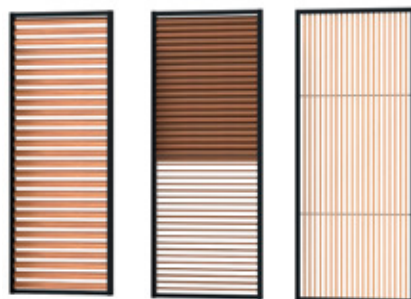

Choose the natural look of wood while enjoying all the advantages of aluminum:

- Low maintenance
- Colorfast
- Shape-retaining

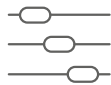

Wood

The Loggia sun protection panels can also be equipped with real wood. This natural material will gradually develop a silver-gray patina and requires more specific maintenance—but it offers a beautiful, organic connection to the surrounding landscape where your Camargue (Skye) is installed.

TIP: Which colors should I choose?

Consider selecting a lighter color for the blades than the structure. This creates a more open feeling and offers additional protection against sunlight and excessive heat. A darker roof may create the impression of a lower ceiling.

Extensive personalisation

Fixscreens

Choose from over 50 colors and three different weave patterns, plus insect mesh options (p. 24).

Your local Renson expert can help you find the ideal color and fabric type for your patio cover screens.

TIP: How to choose the right color?

- Dark fabrics block heat more effectively
- Tighter weaves (low openness factor) reduce heat and light
- Light fabrics reflect more sunlight

For optimal thermal comfort and reduced overheating:

- Dark fabrics provide a better daytime view to the outside
- Light fabrics allow more natural light in
- Fabrics with a low openness factor:
 - Let in less light
 - Reduce glare
 - Offer increased privacy

Fabrics

Add a soft touch with textiles available in a range of colors and patterns to suit any application. Fixscreens come in multiple weave options that influence not only the style but also the level of transparency. Curtain fabric selection plays a major role in creating a cozy, inviting atmosphere, and this softness can carry over seamlessly into Loggia Canvas as well.

Loggia® Canvas

Loggia Canvas fabrics are available in the same colours as the screens, plus the eight colours below:

Delicate Beige

Antique Bronze

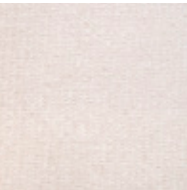

Desert Rock

Deep Wood

Crystal Teal

Smart control

Renson Connect App

The Renson Connect app makes it easy to control your Camargue Skye patio cover right from your smartphone or tablet. Adjust your louvered roof with just a tap. The app is free to download and simple to set up.

Handheld remotes

Control your Camargue with a simple remote. One touch opens or closes the roof, adjusts lighting, or powers the heating.

Wall switch

The Somfy wall switch is ideal for those who prefer the tactile feel of a physical control over a remote or smartphone app.

Home automation

Your Camargue can also be integrated into your home's broader automation system. This allows for more advanced scheduling, control, and a truly connected outdoor living experience.

Quality

Our patio covers provide varying levels of protection and comfort. To guarantee this comfort, each model is rigorously tested for water drainage, load-bearing capacity, and wind resistance, among other factors.

-  Structural strength
-  Sustainability
-  State-of-the-art facilities

Structural strength

At Renson, we guarantee the highest quality by thoroughly testing and certifying our products according to the strictest industry standards.

Aluminum structure

Camargue and Camargue Skye are built with extruded aluminum profiles—lightweight, strong, rust-resistant, and designed to withstand extreme weather conditions.

Water drainage

Water resistance and drainage performance are tested using a spray system that simulates rainstorms. This allows us to determine flow rate efficiency and how it can be further optimized.

Load-bearing capacity

Our patio covers are engineered to handle diverse weather conditions, including wind and snow. Load capacities are calculated through static strength analysis and validated by internal testing. The maximum load depends on several variables: structure type, surface area, model, integrated elements, and location. As a general guideline, the structure is designed to deflect no more than 1/200th of its longest span without permanent deformation—made possible by our patented frame tensioning system. In the case of heavy snowfall, the roof must be left open..

Wind

Static calculations based on Eurocode 9* require the roof blades to be opened (placed vertically) at wind speeds above 50 km/h / 31 mph. At higher speeds, the blades can no longer be operated due to excessive force on the motor. However, if the blades remain closed for any reason, wind tunnel tests have shown they can withstand:

- Up to 160 km/h / 99 mph for Camargue
- Up to 120 km/h / 75 mph for Camargue Skye
- Up to 160 km/h / 99 mph for Camargue Skye only with stacked blades

Sun protection screens can be operated up to 30 km/h / 19 mph, but must be retracted above 60 km/h / 37 mph. Loggia panels and glass sliding panels should be opened at wind speeds exceeding 50 km/h / 31 mph.

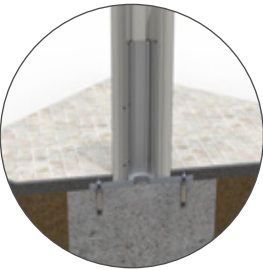

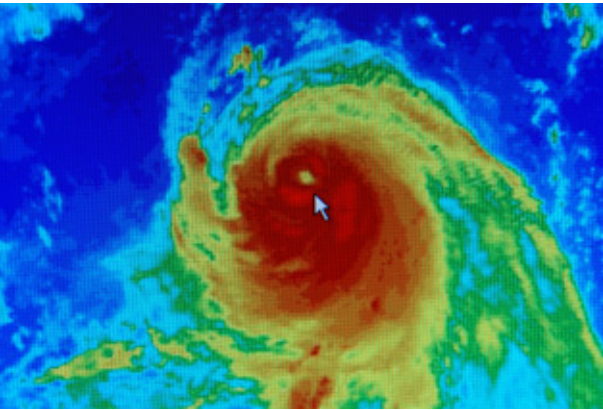

Miami Dade NOA

Renson Camargue has undergone rigorous testing to obtain Miami-Dade approval. This certification means Renson's products have proven their performance under Hurricane caterogy 5.

The approval process involves comprehensive wind resistance and structural testing in full compliance with Miami-Dade's Product Control Section. Once approved, the product meets the highest safety and quality standards, giving both homeowners and contractors peace of mind.

With Miami-Dade approval, Renson Camargue offers not only exceptional design and performance but also meets the most demanding requirements for wind resistance and structural stability—making it an ideal choice for homes in hurricane-prone areas as florida.

Miami-Dade
Hurricane resistance

Invisible strength

Camargue's fully enclosed column structure meets the strictest building standards.

Wind-resistant sliding panels

Automatic locking thanks to mechanical stoppers

**Eurocode 9 is a European standard that provides guidelines for the design of aluminum structures. Renson strictly adheres to Eurocode 9 standards in the development of its products to ensure the safety, stability, and durability of its patio covers—even under extreme weather conditions.*

Sustainability

The choice of aluminum as the primary material for Renson patio covers is a deliberate and thoughtful one, it sets the tone for our sustainable outdoor living philosophy.

Aluminum is highly resistant to natural weather conditions and requires minimal maintenance. Its high recyclability contributes to a lower environmental footprint.

Our products are manufactured in a state-of-the-art production facility powered by renewable energy, where we follow strict standards to ensure minimal emissions. The result: a patio cover that meets the highest quality and sustainability standards—so you can enjoy your outdoor dream space worry-free.

Warranty

Register your patio cover online after installation and receive a 10-year product warranty covering both the structure and the finish.

¹ 10 years after registration. Standard 5-year warranty for installations located less than 500 meters (1,640 feet) from the coast or in areas with heavy pollution. This applies to wood design elements, aluminum castings, and mounting brackets.
Important: Chlorinated fumes in an outdoor environment will not affect the motor system. However, direct contact between the columns and/or mounting brackets and chlorinated water may cause the coating to peel. For this reason, the patio cover should ideally be installed in a location where it is not directly exposed to swimming pool water or seawater. Damage caused by such exposure is not covered under the warranty.

² Rippling typical of polyester fabrics is not covered by the warranty. 2 years warranty on Crystal full width.

Renson Maintenance Set

Your patio cover is built to last for years in various weather conditions. To maximize its lifespan, we recommend cleaning and maintaining it once a year using the Renson Maintenance Set. This set contains carefully selected products that help preserve the rich color and shine of the powder-coated aluminum, providing added protection against acid rain, sea air, and UV rays.

Minimal maintenance, maximum enjoyment

At Renson, ease of use and low maintenance are top priorities—because the less time you spend cleaning, the more time you can spend enjoying your outdoor space.

State-of-the-art facilities

1. Automated warehouse

- 27-meter-high warehouse
- 28 levels
- Artificial intelligence-driven operations

2. Profile Handling

- Fully automated processes
- Sawing, milling, sanding, welding, and more

3. Aorta

- Buffer storage
- Powder coating optimization

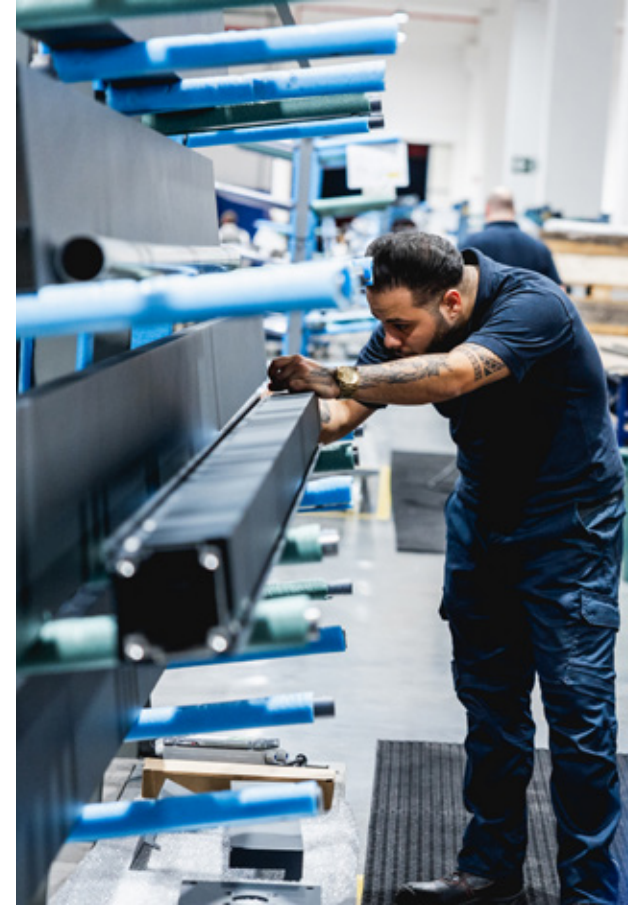

4. Powder-coating facility

- 2-meter-long rails
